

Panic button is one of important components for fire alarm systems and intrusion alarms. Panic button is the device that alerting people when in emergency situation or summon aid in an emergency. We provide a range of top quality ABS (fire insulated plastic) housing panic buttons and stainless steel panic buttons for commercial and residential applications. The button provides standard NC (normal close) output for connection with fire and intrusion alarm system or medical alert systems.

Our panic buttons with features of key-reset, and anti-lockreset mechanism to ensure unit still operates if reset key is left in the unit and silent operation.
